IKOnv / BR2023 / IKO Innoxi TOP / EN / 00001

IKO is a leading manufacturer of roofing materials, insulation and waterproofing solutions. With more than 30 factories worldwide and 4,500 employees, IKO is a global player in this market segment. Yet, as a family-owned company, IKO distinguishes itself through its short lines of communication and quick decisions that translate into a highly agile and decisive company.

IKO CLOSE to you ...

CLOSE TO YOU, but active worldwide

The combination of our international experience and knowledge of local practices allows us to always provide you with the best solution. For our IKO Innovi TPO roofing systems, we can call on the expertise and know-how of our state-of-the-art production facility in North America.

CLOSE TO YOU because of our experience

We have been at the top of the market for over 110 years. For both industrial and private buildings, IKO has a ready-made solution for bitumen and TPO roofing membranes, insulation boards, liquid waterproofing, and complementary products such as primers, adhesives, and conduits.

CLOSE TO YOU thanks to our advice and customised training sessions

Beyond using quality and reliable products, your craftsmanship makes the difference.

Our extensive sales and technical team are on hand daily to provide appropriate advice for your project, answer your questions and share their knowledge.

Guidance during the start-up of a project, standard or specific training sessions at one of our training centres, we are happy to provide you with all the tools you need to apply our products with confidence.

To get the best out of your IKO Innovi TPO roof covering, it is absolutely essential that the roofer receives training. You arrange this with your regular IKO account manager.

WHY CHOOSE IKO INNOVI TPO?

High performance and ease of installation are paramount in every development we undertake, including our single-ply roofing system IKO Innovi TPO. The latest evolutions in thermoplastic engineering, combined with an advanced manufacturing process called IKO Matrix technology, result in the IKO Innovi TPO roofing membrane. This roofing membrane is designed to meet the biggest challenges for your commercial and industrial projects, namely a long lifespan and fast installation.

Long lifespan

The IKO Matrix technology used on IKO Innovi TPO, which involves testing this roofing membrane under the harshest weather simulations, is patented and, therefore, unique. An insured warranty can, of course, be issued on an IKO Innovi TPO roofing system.

Featuring
MATRIX™
Performance Weathering Technology

Fast installation

Roofers regard IKO Innovi TPO as extremely easy to install. IKO Innovi TPO is highly flexible, available in large dimensions and has a wide-weld window.

Environmentally conscious

IKO Innovi TPO is a reflective membrane (SRI 97) that provides a cooling effect. It contains no chlorine or plasticisers, so it has no harmful effects on the environment or health.

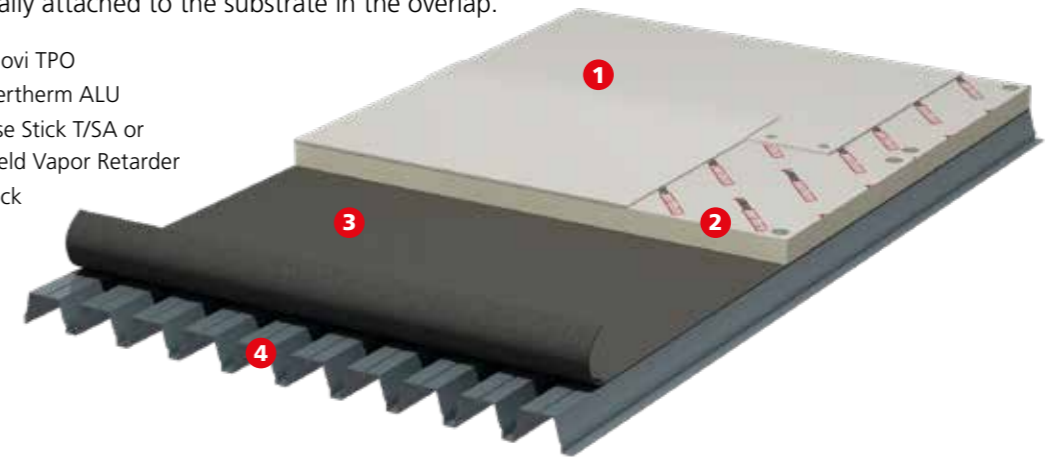

SYSTEMS

IKO Innovati TPO is perfect for energy roofs (in combination with solar panels) and utility roofs. Both mechanically attached and ballasted systems are possible.

Mechanically attached

In this roofing system, the Innovati TPO roofing membranes are mechanically attached to the substrate in the overlap.

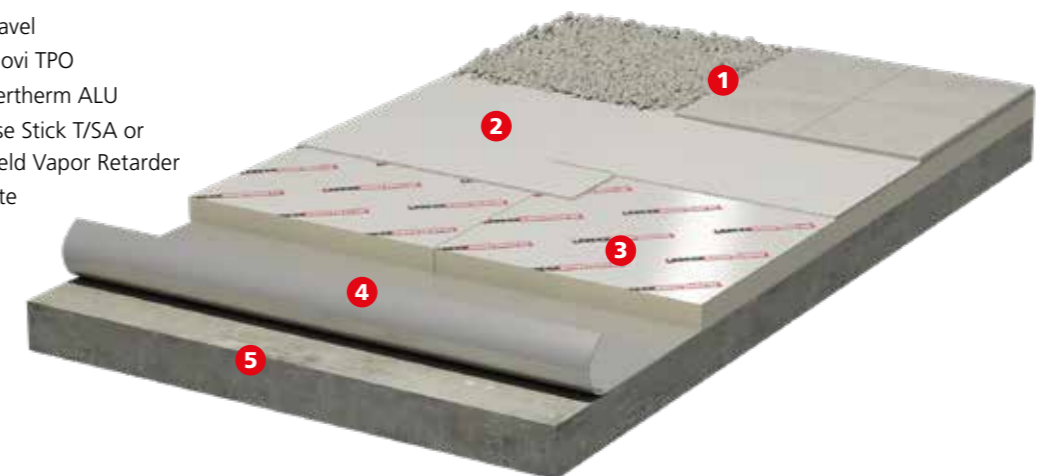

- 1 - IKO Innovati TPO
- 2 - IKO enertherm ALU
- 3 - IKO base Stick T/SA or IKO shield Vapor Retarder
- 4 - Steeldeck

Ballasted

In this roofing system, the membrane is installed over loose-laid insulation. To keep it in place, this system should be finished with an approved ballast such as tiles or gravel.

- 1 - Tiles/gravel
- 2 - IKO Innovati TPO
- 3 - IKO enertherm ALU
- 4 - IKO base Stick T/SA or IKO shield Vapor Retarder
- 5 - Concrete

◀ IKO Innovati TPO

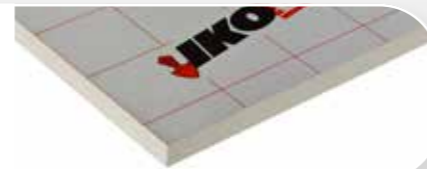

IKO Innovati TPO is a waterproofing membrane composed of thermoplastic polyolefin (TPO). The membrane consists of a top and underside produced according to MATRIX technology, with a polyester reinforcement in between, which guarantees high flexibility and exceptional strength.

Item number	Description	Thickness (mm)	Length (m)	Width (m)	Certificate

WITH IKO, YOU CHOOSE A MANUFACTURER THAT OFFERS COMPLETE SOLUTIONS

IKO enertherm ALU

IKO enertherm ALU is used for insulating flat roofs for new construction on concrete, steel deck and timber or in a roof renovation system.

IKO InnoviFlash

Unreinforced membrane and fittings for incorporating detailing.

IKO Innovi Drains

Roof drains and conduits from IKO InnoviDrain provide an easy and 100% watertight finish.

TPO adhesives, sealants and other fluids

Innovi Bond

Long shelf life, easy application and fast bonding times make InnoviBond adhesives the perfect contact adhesive for use on edges and roof upstands with IKO Innovi TPO waterproofing membranes.

Innovi Pre Wash

Innovi Pre-Wash is ideally suited for cleaning dirt and debris on IKO Innovi membranes. It can be used before welding TPO membranes and weldable fittings.

IKO Innovi Seal Water Stop Mastic & IKO Innovi Seal TPO Edge Sealant

IKO InnoviSeal products are ideally suited for finishing complex roof details.
